Contractor(s) must provide at least one mathematical formula that will govern the maximum ride price(s) allowed throughout the term of the contract. Contractor may provide up to five mathematical formulas if the Contractor wants different formulas for different geographical areas. Contractor will then apply these formula(s) to the hypothetical example(s) below to show how these mathematical formula(s) will be applied to real-life booking requests. The text box provided is not intended to limit the number of characters / amount of space for these formulas. If you need more space, provide your formulas as a separate attachment and data enter "see attachment" in the provided box.

Mathematical formula(s) that will govern the maximum ride price(s):

FORMULA AMBULATORY

Base Fare +(# of miles X per mile rate) + (# of minutes X per min rate) =Total FARE (not less than Min Variable Fare). Add Platform Fee = Invoice
 If Total FARE < Min Variable Fare, then Min Variable Fare + Platform Fee = Invoice

FORMULA WAV

Base Fare + per mile rate after 5 miles

UZURV DOES NOT UTILIZE SURGE PRICING

SEE ATTACHMENT FOR FARE COMPONENTS

If the passenger(s) are willing to opt-in to "ride-share", what, if any, discount will apply to their ride? How will this be calculated?

UZURV does not have a shared ride option at this time. We have found shared ride models are not optimal for older adults and individuals with disabilities and can reduce efficiency and safety. We are happy to discuss other opportunities for discounts with Monmouth County.

For evaluation purposes: The lowest Total Cost will be determined by adding all of the prices listed in the 'Total Price' column. The sum of the provided hypothetical costs should be placed in the shaded in BLUE cell next to ' Total Cost Representation*'. This total will be used to determine the "lowest total cost" for comparing one Contractor's costs to the costs submitted by other Contractors.
